AnGes is a biopharmaceutical company focused on gene-based medicines

Our pipeline

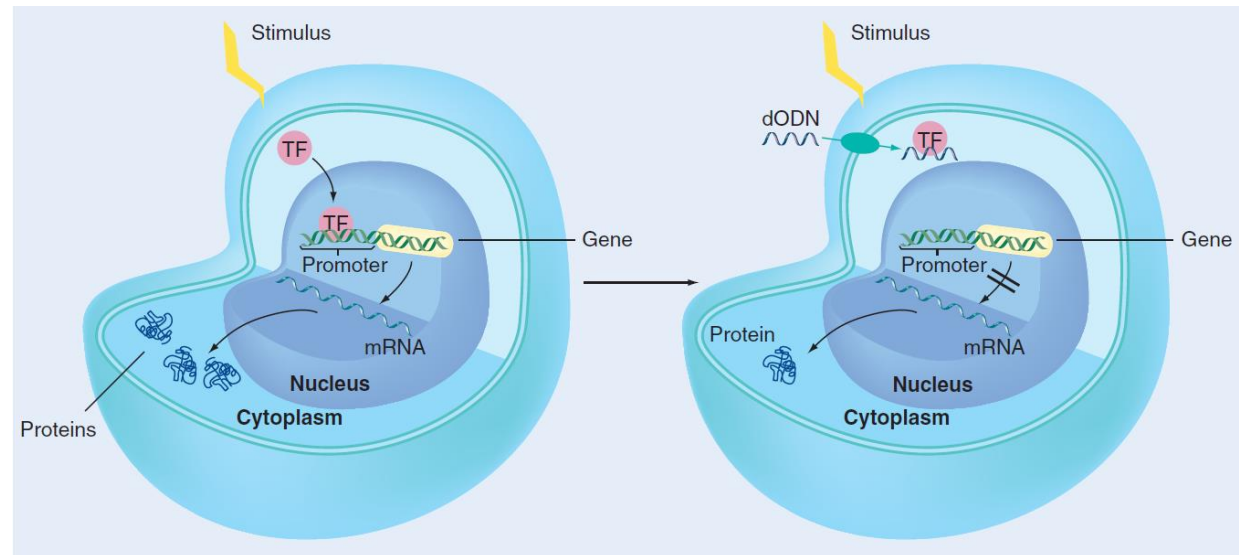

Collategene[®]

- Collategene (bepermingene perplasmid) is a plasmid DNA gene therapy coding human hepatocyte growth factor (hHGF) driven by a cytomegalovirus promoter. NDA filed in Japan on Jan 2018 for treatment of Critical Limb Ischemia (CLI).

NF- κ B Decoy Oligonucleotide

- NF- κ B Decoy Oligonucleotide is a 20mer double-stranded DNA with the same sequence as the binding site of NF- κ B on the DNA (κ B motif). Phase 1b study in low back pain ongoing.

Angiotensin II DNA vaccine

- Angiotensin II DNA vaccine is a combination of a plasmid DNA encoding Angiotensin II (Ang II) Hepatitis B virus core (HBc) fusion and Ang II conjugation peptide (no adjuvant). Phase 1/2 study ongoing.
