Momotaro-Gene is cancer gene therapy company who fights against various types of cancer by immuno-oncological effects of the product.

We currently focus our energy on realizing Phase I/II clinical study for prostate cancer and malignant mesothelioma in the US and Japan to establish its proof of concept as a real innovative medicine for cancer.

While we already have a partner in Japan, Kyorin Pharmaceutical, and in China, EPS China, we wish to have a partnership with a pharmaceutical company in other regions. We are seeking the alliance pharmaceutical partner especially in the US and EP rights.
